DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in
5 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is
eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e)
has been timely paid, the finality of the previous Office action has been withdrawn pursuant to
37 CFR 1.114. Applicant's submission filed on March 19, 2003 has been entered (paper #10).

Preliminary Amendment

10 2. Receipt is acknowledged of the preliminary amendment filed on March 19 (paper #11).
Claims 22, 23, and 25-27 are amended, and claims 28-41 are newly added. Accordingly, claims
22-41 remain for examination.

Claim Rejections - 35 USC § 102

15 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the
basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

20 (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on
sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 22-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Desai (US
5,493,105).

Re claims 22, 29, and 39, Desai teaches an electronic business card system (see abstract)
25 comprising a telephone interface (col. 2, lines 20-21; col. 3, lines 24+), which initiates auto-dial

Art Unit: 2876

function as shown in figure 10. The system also includes a scanner 116 which reads various information from business card (col. 4, line 58 – col. 5, line 5). The data, which can be stored in the card includes (col. 5, line 66+) name, title, company name a phone number and a fax number. When the information is retrieved from the card, the data have to parsed and stored in the right

5 locations in order for the system to be functional.

Re claims 23 and 30, the system further comprised of a user data interface such as a keyboard 118 (col. 2, lines 9+), and the user can edit information read from the card (col. 8, lines 48 – 61). Accordingly, the number used in faxing or phoning is from the card or user-inputted number via keyboard.

10 Re claims 24, 31, and 33-35, the interface operates in several modes (col. 6, lines 53+), each mode providing separate functions to the user such as accepting, storing accessing and manipulating entered data.

Re claims 25 and 32, the system provides an interface for the users to enter each separate fields (col. 7, lines 47+), and thus system would be able to differentiate a voice phone number
15 from a facsimile number.

Re claims 26, 36, and 40, the scanner/card reader allows the card to be swiped in either orientation (col. 5, lines 1+).

Re claims 27, 28, 37, 38, and 41, auto-dialer checks its telephone connection (col. 16, lines 65+), ensuring that the dialer is in ready-status if the call is initiated. Although not
20 explicitly suggested, the telephone interface can be a fax machine.
